

APPENDIX 2

Water License Application (Nunavut Marine Infrastructure Project-Pond Inlet)

-Block 9- Description of Undertaking

Last year, Tower Arctic asked the Nunavut Water Board about a license to cross watercourses during the construction of the hauling road for the Pond Inlet Marine Infrastructure project. In October 2018, Tower Arctic completed the hauling route and began the construction of the breakwaters in Eclipse sound.

The object of this license is to ask the Nunavut Water Board, the permission of refueling the construction equipment inside the 31 meters of the high water line.

With all the appropriate mitigation measures (refueling checklist, trained employees, spill response plan, spill kits), Tower Arctic thinks that refueling in this zone could be a safe operation while reducing considerably the travel time of the equipment to go outside the breakwater for refueling.
