Hi,

You will find attached my Application for approval for use of water without a licence for an ecosystem monitoring project that will be held on Igloolik Island during summer 2014.

Thanks for confirming the reception and processing of my full application.

Please note that we were expecting to wait the completion of the NIRB and NPC screening before to send that application to your organization. Hence, we indicated YES to the following questions:

- I certify that the Nunavut Planning Commission's land use planning requirements under Article 11 of the Nunavut Land Claims Agreement have been met.
- I certify that the Nunavut Impact Review Board's development impact review requirements under Article 12 of the NLCA have been met.

Yet, we were advised by NIRB to proceed before the completion of their screening, but were unable to remove the check marks beside YES under the questions indicated above. So thanks to take that into account, by considering that the NIRB screening and the NPC conformity screening are currently being done, and that we will transmit the results of these screenings as soon as they become available.

Best wishes,

Nicolas Lecomte
