TITLE: Assessing the impact of small, Canadian Arctic river flows to the freshwater budget of the Canadian Archipelago.

OBJECTIVES OF RESEARCH:

There are two primary goals of this project. Determine whether relatively small Canadian Arctic rivers significantly contribute to the total volume of freshwater that drains through Davis Strait and if they are chemically distinct from larger North American rivers such as the Mackenzie and Yukon rivers. To achieve these goals we propose to collect water samples from seven different rivers and their estuaries spanning over Nunavut and the Northwest Territories over a three year study period.

TERMS & CONDITIONS:

The holder of the licence will be bound by the terms and conditions of the Nunavut Impact Review Board Screening Decision Report and the Department of Culture & Heritage archaeological sites terms and conditions. These terms and conditions will form part of this licence.

DATA COLLECTION IN NU:

DATES: June 13, 2014-October 01, 2016

LOCATION: Clyde River, Coppermine River, Ellice River, Back River, Cunningham River

Scientific Research License 02 005 16R-M expires on December 31, 2016

Issued at Iqaluit, NU on December 15, 2015
