

Dear Nunavut Water Board Manager and Chairs,

I wish to present to you my project overview for this season fieldwork. In 2018, similar to the previous year, our objective to visit the Haughton Impact Structure on Devon Island to study permafrost and periglacial processes in this extremely arid area. With a team of 3 scientists (graduate students and myself) we plan to fly into our study site July 17<sup>th</sup> 2018 and return to Resolute August the 2<sup>nd</sup> 2018.

We sent our post-field activity report for 2017 this last January. We are including in this present application for approval without a license a non-technical summary (English and Inuktitut) and the filled-out application form.

Cordially,

Etienne Godin
