Hi Holly,

My name is Dave and I've recently been assigned to complete a technical review of your application for authorization without a licence for the Fury and Hecla Geoscience Project, Nunavut Water Board Application No. 8WLC-FHG----.

I have a couple questions about the fuel caches that will support the project. If this information already exists in submissions provided to NPC or others, please consider providing excerpts from that material rather than generating a new submission.

1. Could you please provide some discussion about the fuel caches at Ivasarak Lake, Neergaard Lake, and the Gifford River Camp? Please describe:
  - Siting criteria (e.g.; setbacks)
  - Secondary containment (e.g. description, and if pertinent design, of the "large fuel containment berm" at Gifford River Camp)
  - Abandonment and restoration (e.g. schedule for fuel cache removal, description for what is required to abandon/restore the "large fuel containment berm" at Gifford River Camp).
2. Could you please provide some discussion about the incinerator you're considering for the camp? Please describe siting considerations and waste/ash management to avoid wildlife, debris, or dust issues.

Regards,

Dave Baines MSc EP
