RE: Site inspection for 8WLC-GMB1415 - GEM-2 Montresor Belt

Mr. Percival,

Thank you for the detailed field activity report that was submitted for the above-listed project.

An opportunistic inspection was conducted on July 6, 2016 of the two camp locations (N66°19'31.7" W96°32'24.5", and N66°01'52.5" W97°19'25.0"). No visible residual impacts were noted at the sites from camp activities and removal of materials appeared complete. No further remediation is required.

Regards,

Eva Paul
