Previous Licence/Approval Number: **8WLC-HIP1516**

The Board reminds the Applicant that as stated in s. 46 of the NWNSRTA, the expiry or cancellation of any previous licence does not relieve the holder from any outstanding obligations imposed under the licence.

7. CLASSIFICATION OF UNDERTAKING - Indicate the classification of undertaking by checking one of the following boxes.

See Appendix C of the Guide for descriptions of classifications of undertakings.

8. DESCRIPTION OF UNDERTAKING AND EQUIPMENT USED – Provide a brief description of the undertaking including a description of any equipment that will be used in using water or depositing waste.

The Federal Government's Geological Survey of Canada, through its Geo-Mapping for Energy and Minerals Program, is conducting a research project, the High Arctic Large Igneous Province Activity (HALIP) for the 2015 and 2016 summer field seasons. Most of the work would take place on Axel Heiberg Island and some on northern end of Ellesmere Island in 2016. The work will consist of six people in three camps of 2 people in each camp.

It is expected that the 2016 fieldwork will take four weeks to complete. Several temporary 'fly camps' that will be used. Crews of two people will work out of each fly camp. Support will be from the Eureka weather station on Ellesmere Island.

Fly camps will be set up by helicopter and researchers will remain in the camps for 5 to 10 days at each site and travel by foot. We will walk in traverses and pick up small, fist-sized surface rock samples every few meters for later laboratory analyses.

Water for the camps will be taken from small creeks using a scoop. About 10 litres per person per day will be used to drink, cook and wash dishes. Garbage and solid waste will be removed to Eureka for disposal. Grey water and sewage will be disposed in a sump at least 100 m from a water body.

The work being proposed in the HALIP project will allow us to better understand the geology of the region and assess the potential for gas and oil. While there is no indication of mineral deposits in the area, as part of a typical geological study, we will test for minerals during the analysis phase of the project but only from samples outside of the areas designated as recreational in the Draft Nunavut Land Use Plan.

9. SCHEDULE – Applicants are advised that approvals without a licence are issued for a one year term.
