Upon arrival at the camp the Inspector noted the on-going and continuing maintenance on the runway and fuel storage areas of the lower camp. The Licensee is reminded to ensure that sufficient secondary containment is available for all fuel stored on site. The licensee is also encouraged to ensure that old barrels of unknown or expired fuels are removed from camp before these become liabilities to the camp and start to leak. Inspector.

The Licensee is also managing a camp belonging to the Canadian Space Agency. As noted during the Inspection the site has a number of barrels of fuel and while not in use these barrels must be monitored on a regular basis to ensure the integrity of the drums remains in place.

The Licensee is encouraged to take such steps as are necessary to ensure that this camp is either individually licensed or rolled up in the Proponents authorizations.
